

Application Note

Industry	:	Food and Beverage
Instrument	:	Alcohol meter
Measurement method	:	Resonant frequency oscillation, GB 5009.225

This is an example about determination of the alcohol content (vol%), specific gravity (t/t) and density (g/cm³) in Italian red wine. The alcohol meter can be used enough for determination of these applications on the wine making process.

Technical note: The alcohol sample must be distilled as per the procedure specified on local regulations before the alcohol content can be measured by this alcohol meter.

Alcohol meter ALM-155
